

## Cómo publicar en una revista científica

Mara Daltaubuit Test  
Jefa de Programas Educativos

# Los desafíos que tenemos hoy en día para publicar

# Desafíos a la hora de publicar

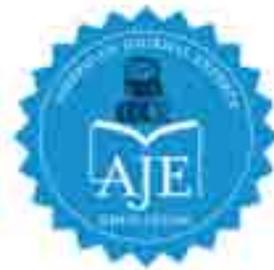

- **Investigación**

- ~ 9 millones alrededor del mundo

- **Publicaciones**

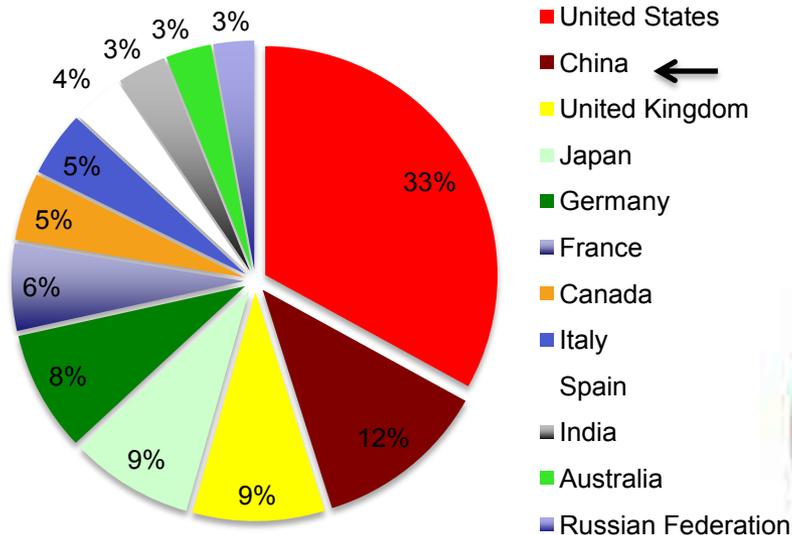

- Se estima que hay ~2 millones de publicaciones
  - Hay un crecimiento aproximado de 3 - 3.5% por año (no ha parado de crecer en 200 años)
  - Negocio de aproximadamente 19 billones de dólares
- 20-25 mil se encuentran en el área de Ciencia, Tecnología y Medicina (STM) + arbitraje y se encuentran consolidados en 7 Mega-editoriales principales
  - + Elsevier
  - + Taylor & Francis
  - + Sage
  - + Springer
  - + Wiley
  - + Lippincott
  - + Nature/ Palgrave

# Desafíos a la hora de publicar

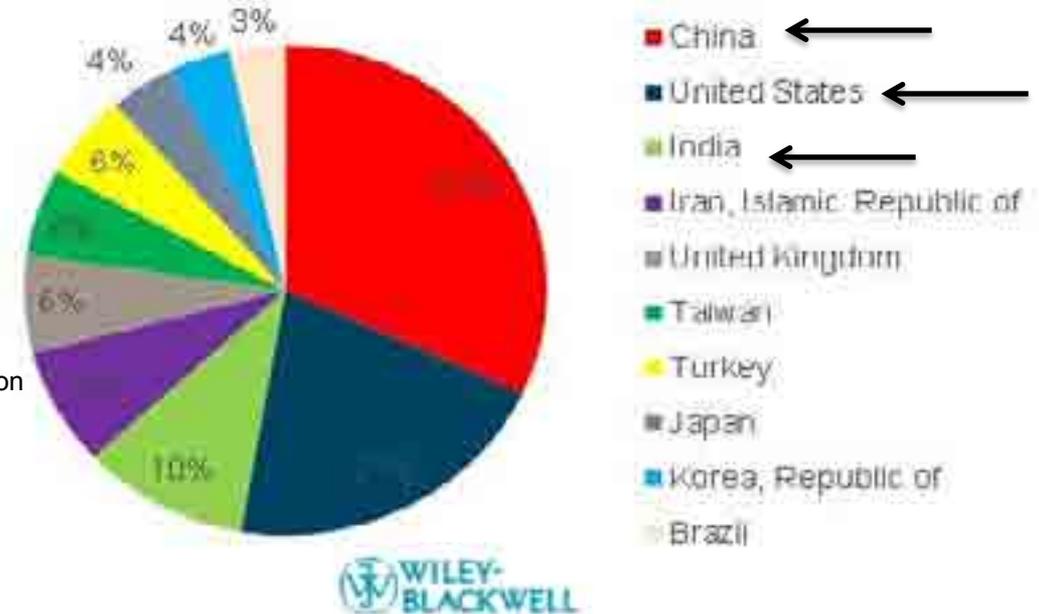

- La triada de la investigación (E.E.U.U., RU y Japón)

2011

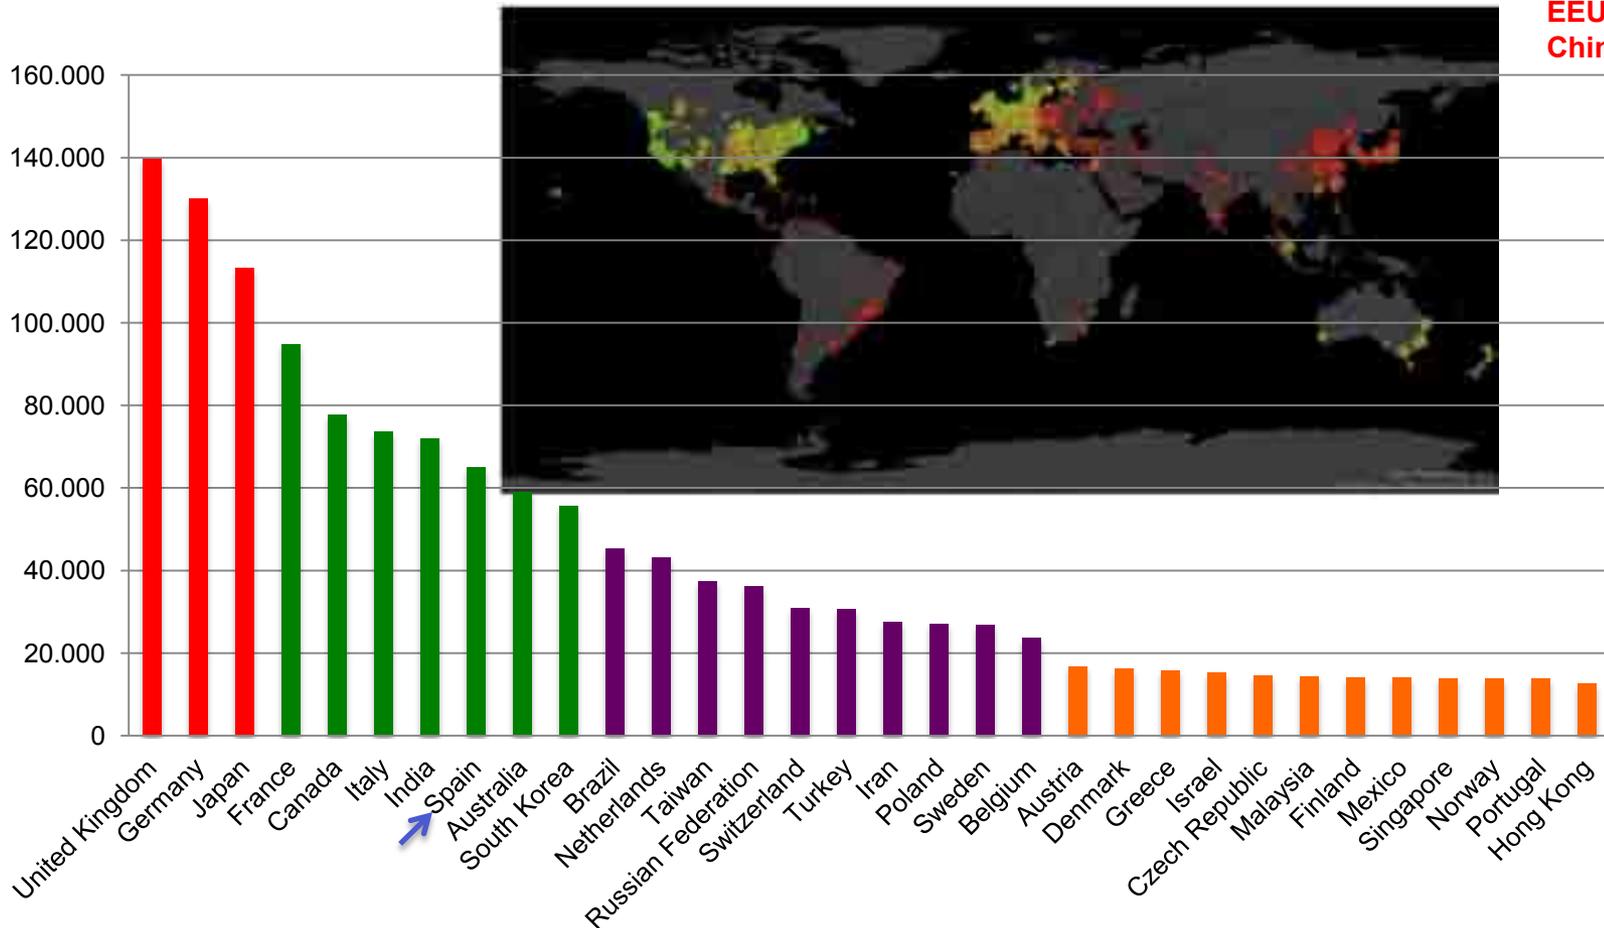

2013 Projected

# Desafíos a la hora de publicar

- Países con más de 10,000 trabajos presentados

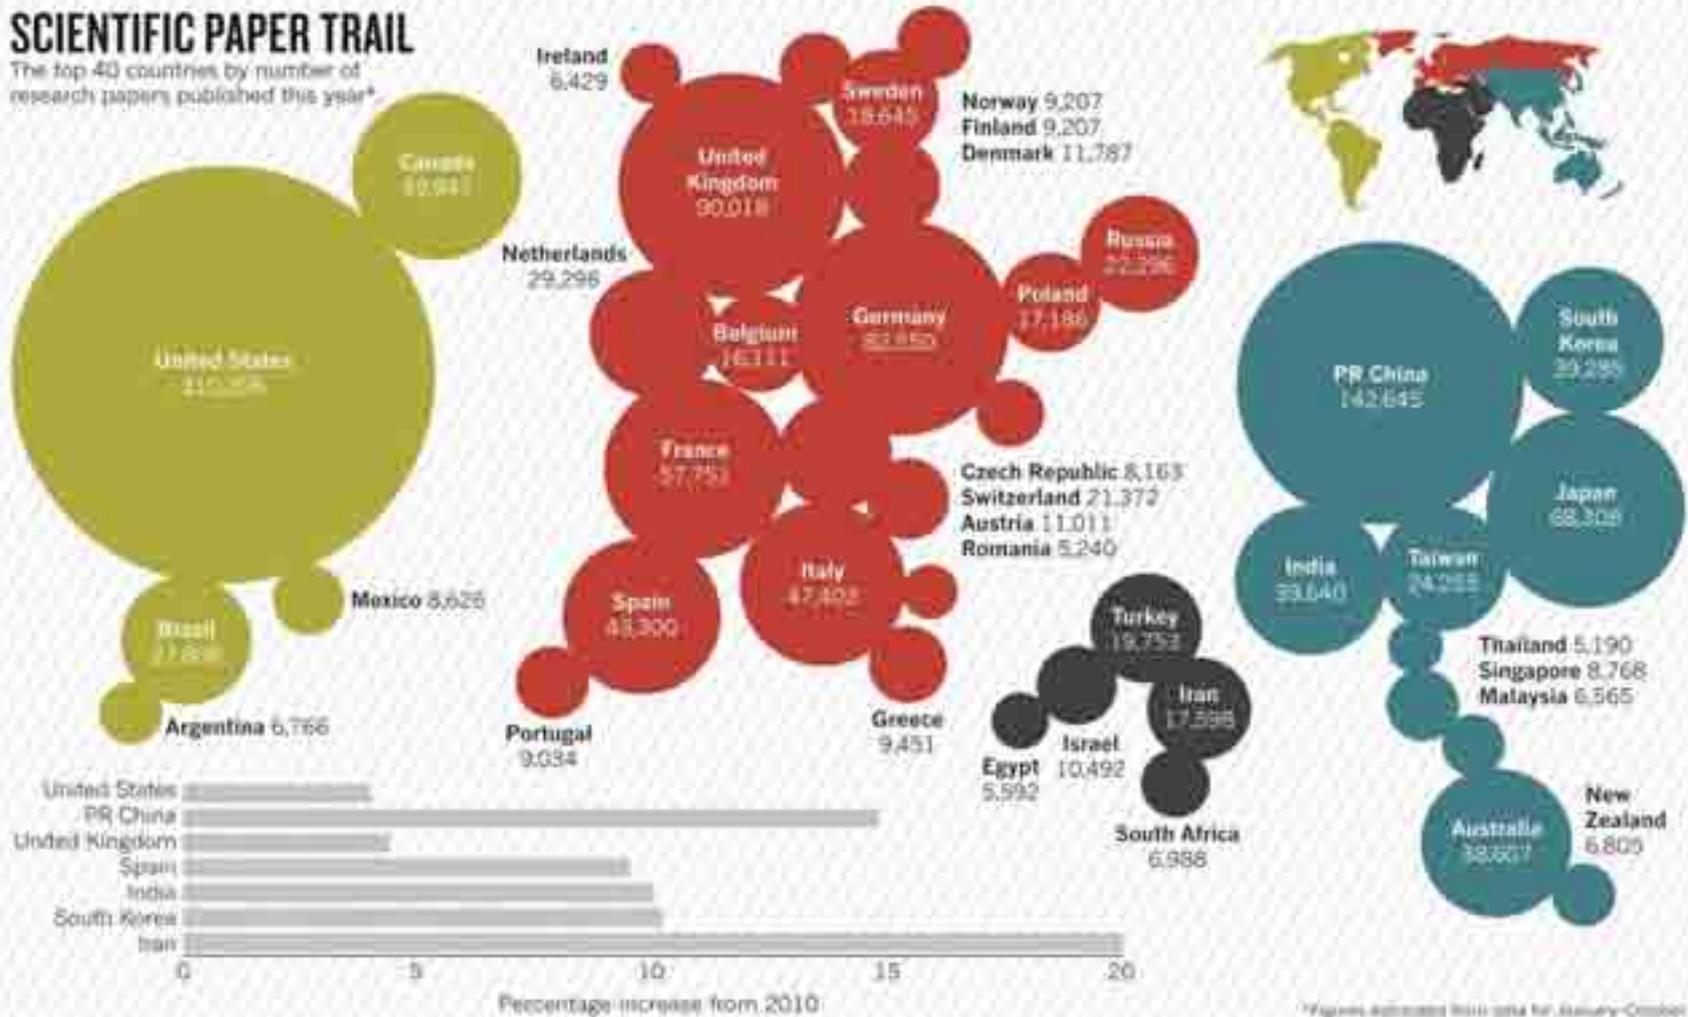

# La publicación a nivel mundial al día de hoy

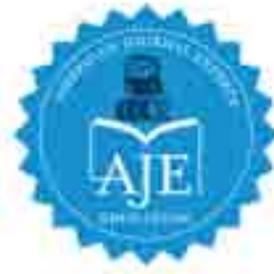

## SCIENTIFIC PAPER TRAIL

The top 40 countries by number of research papers published this year\*

# Las grandes editoriales

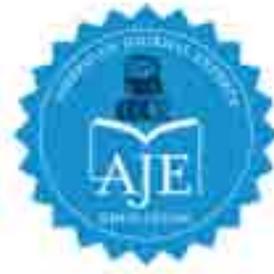

- **Retos**
  - Con un aumento de publicaciones
    - Nos estamos encontrando con fatiga de árbitros (Reviewer Fatigue)

# El negocio de la publicación en el 2013

# Las grandes editoriales

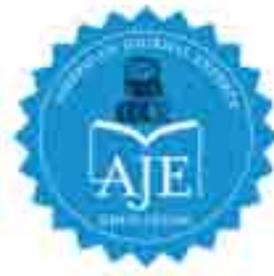

- Open Access
  - Más de 36 Universidades de los EEUU
    - Digital Access to Scholarship at Harvard ([dash.harvard.edu](http://dash.harvard.edu))
    - Cornell University Library - arXiv ([arxiv.org](http://arxiv.org))
    - Duke University, Universidad de Kansas
  - **Reino Unido y Europa**
    - Universidad de Utrech

## POR LO QUE:

- Las grandes revistas científicas se han vuelto revistas multidisciplinarias (en OA)
  - Public Library of Science (*PLoS ONE*)
  - *British Medical Journal (BMJ) Open*
  - *SAGE Open*
  - *Scientific Reports* (de Nature Publishing Group)

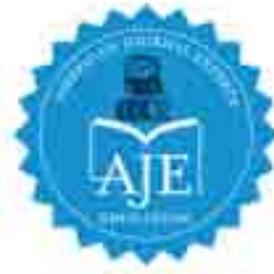

# Mitos del Acceso abierto (AA)

- 1) No hay arbitraje
- 2) Peor calidad que revistas tradicionales
  - ***PLoS Biology***, es el #1 en la área de biología con un FI de **12.690**.
  - ***PLoS Pathogens***, es el #1 en parasitología y virología con un FI de **9.13**.
  - ***PLoS ONE***, FI es de **3.730**.
- 3) Derechos de autor
  - “Creative Commons”
- 4) Moda pasajera
- 5) Ayuda a los lectores y NO a los autores

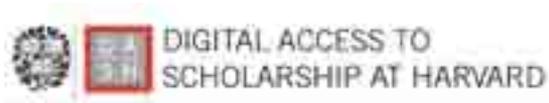

# Acceso Abierto

- Green Open Access (Versión del autor “arXiv” Archivado)
- Gold Open Access (Plos, BioMed Central, Hindawi y Frontiers)
- Platinum Open Acces (Autores no pagan, pagan las instituciones)

arXiv.org

# El auto archivo

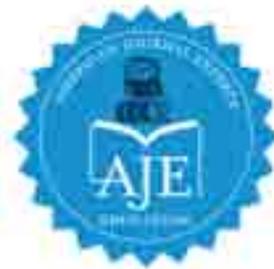

bioRxiv

THE PREPRINT SERVER FOR BIOLOGY

Coming soon from Cold Spring Harbor Laboratory

# Los nuevos modelos de publicación

- En el año 2000, **Vitek Tracz** crea **BioMed Central** (BMC), una casa editorial de AA, basada en el modelo de “el autor-paga”.
- En la actualidad, BMC es uno de los jugadores más importante en el movimiento, con más de 110 revistas de acceso abierto (Acaba de ser abosribida por Springer).

## WELCOME TO PUBMED CENTRAL CANADA (PMC CANADA)

PMC Canada provides free access to a stable and permanent online digital archive of full-text, peer-reviewed health and life sciences journal articles, including the research outputs of Canadian Institutes of Health Research (CIHR) grant recipients:

- Search PMC Canada using the official language of your choice;
- Limit your search results to CIHR-funded publications and use enhanced filters to categorize content;
- Our Advanced Search feature lets you find what you need quickly – whether it's a journal article written by authors at a particular institution, or one that is associated with a digital object identifier (DOI);
- Power searchers can use the Search Builder feature to combine field-specific queries and proximity searching to limit the number of words between terms;
- Typographical suggestions will detect spelling errors in your queries, and the "More like this" feature will help you discover other search-related content;
- Like what you find? Save search results within a session to the clipboard, and export to your favourite citation management software.

## ABOUT PMC CANADA

PMC Canada provides free access to a stable and permanent online digital archive of full-text, peer-reviewed health and life sciences research publications. It builds on [PubMed Central](#) (PMC), the archive developed by the U.S. [National Library of Medicine](#) (NLM), which is part of the U.S. [National Institutes of Health](#) (NIH). The search interface allows anyone to browse, search and download articles.

PMC Canada is a partnership between the National Research Council's [Canada Institute for Scientific and Technical Information](#) (NRC-CISTI), the [Canadian Institutes of Health Research](#) (CIHR), and the U.S. [National Library of Medicine](#).

## PMC CANADA VISION STATEMENT

PMC Canada capitalizes on Canadians' health research investments by allowing public access to and use of research results, supporting better health and care in Canada.

## SUBMITTING A MANUSCRIPT TO PMC CANADA

PMC Canada supports CIHR's [Open Access Policy](#), which requires grant recipients to ensure that their peer-reviewed publications are freely accessible online within 12 months of publication. **At this time, PMC Canada can only accept submissions from CIHR funded Principal Investigators.** If you are a CIHR funded Principal Investigator, and you do not yet have a PMC Canada Manuscript Submission System Account, please contact the [CIHR Help Desk](#).

HIGH QUALITY OPEN ACCESS PUBLISHING AND RESEARCH NETWORKING

## Frontiers is Open Science

Frontiers is an online platform for the scientific community to publish open-access articles and network with colleagues.

- Fast, open-access publication
- Rigorous peer-review in real-time thanks to our interactive, online interface
- Detailed metrics to follow the impact of articles
- A networking platform made especially for the scientific community

## Tweetable abstracts

*Methods* has recently introduced a new submission requirement on page 1 of the [ScholarOne submissions website](#), called a "Tweetable abstract". This box should ideally contain the article's novelty and/or main finding in less than 120 characters (note that's 120 characters, not words, which is a mistake a few authors have made so far).

**Tweetable Abstract (Limit 120 characters - describe the novelty/key finding of your manuscript)**

<input type="text"/>	<input type="text"/>
----------------------	----------------------

Tweetable Abstract Box

If the article is accepted, this text will then be used to let our Twitter followers know when it's available. For those who don't use [Twitter](#), it allows users to post text of up to 140 characters at any one time, for their followers and anyone else on Twitter to see (we ask for a maximum of 120 characters so that we can add a link to the article as well).

WRITING AND PUBLISHING RESOURCES FOR RESEARCHERS

Home About Author Resources Educational Workshops and Seminars Meet Our Authors AJE

### How to Choose between General and Specialized Journals

General, multidisciplinary journals and specialized, discipline-specific journals represent two of the main targets for manuscript publication. Deciding whether to submit to one type or the other requires consideration of your intended audience, which may have implications for publication speed, citations, your own future studies, and others' subsequent work. To learn more about making this choice, [click here](#).

### Editing Tip of the Week: Proper Use of the Term "Both"

The term both is commonly used in technical writing to indicate similarity between samples, datasets, or values. However, the dictionary definition of both—"one and the other"—does little to clarify the meaning or proper use of this word. Furthermore, both can be used as either a pronoun or a conjunction, and each of these contexts has [its own rules](#).

## The Rise and Fall of PLOS ONE's Impact Factor (2012 = 3.730)

POSTED BY PINA DAVIS · JUN 26 2014 · 83 COMMENTS

**FILED UNDER** IMPACT FACTOR, OPEN ACCESS, PLOS ONE, PUBLIC LIBRARY OF SCIENCE

Released on Wednesday afternoon (or to be precise, at exactly 1:10 pm EDT), Thomson Reuters published its 2012 Journal Citation Report (JCR)—an annual collection of citation metrics on the performance of scholarly journals. While the JCR contains many statistics, most publishers and editors await a single metric—the Journal Impact Factor.

NHH (Photo credit: Jason S. Smith)

The Journal Impact Factor (JIF) is a single statistic which summarizes the average citation performance of articles published between two and three years ago within a given journal. For example, the 2012 JIF for journal X is the sum of all 2012 citations made to 2010 and 2011 articles divided by total number of articles published in 2010 and 2011. This is the simple explanation. Those interested in the mechanics of identifying and classifying what goes into the numerator and denominator of this equation are encouraged to read (Hubbert and McVeigh, 2011 and McVeigh and Mann, 2009).

I'm not going to touch on the weaknesses of the JIF or its misuse by academia. For some editors—especially those whose journal performs poorly in terms of citation metrics, or for those with little to lose—criticizing the JIF has become a regular pastime. Every month, dozens of editorials are written on:

# Scholarly Open Access: Revistas depredadoras

## About the Author

### Jeffrey Beall

I work as a librarian at Auraria Library, University of Colorado Denver, in Denver, Colorado.

An academic librarian for over 22 years, I have published extensively in the areas of metadata, full-text searching, and information retrieval.

My interest in scholarly open-access publishing began in 2009 when I reviewed the publisher **Bentham Open** in *The Charleston Advisor*, a journal that reviews electronic

Previously, I served on the editorial board of *Quarterly*, an experience that helped me learn a lot about scholarly publishing. My editorial board ended in December, 2012.

A full list of my publications is available on my website. I was awarded tenure and promoted to associate professor in 2011.

My email address is [jeffrey.beall@ucdenver.edu](mailto:jeffrey.beall@ucdenver.edu).

## LIST OF PUBLISHERS

### Beall's List of Publishers

#### Potential, predatory, open access publishers

This is a list of publishers that I recommend to be avoided. I provide descriptions of each publisher and want to submit a warning for determining their quality.

We hope that this list will help themselves and others avoid journals in the future. I provide geocultural information about each publisher and change in their practices over time.

up-to-date information that is unreported, and I provide information about each publisher's history.

## Aims and scope

This journal publishes worldwide contributions on all aspects of veterinary science and its related subjects. It provides regular book reviews and a short communications section. The journal regularly commissions topical reviews and commentaries on features of major importance. Research areas include infectious diseases, applied biochemistry, parasitology, endocrinology, microbiology, immunology, pathology, pharmacology, physiology, molecular biology, immunogenetics, surgery, ophthalmology, dermatology and anaesthetics.

# Clasificación de las revistas científicas

# Clasificaciones, ¿Cuál es mejor?

- Eigenfactor.
- Factor de Impacto (FI)
- Journal Citation Reports (JCR)
- H-Index
- Immediacy Index

## About this JVI Cover

- **IMPACT FACTOR: 5.189**
- #1 journal in Virology ranked by Eigenfactor score
- #1 cited journal in Virology nearly 94,000 citations
- #5 journal in Virology ranked by Impact Factor

# Eigenfactor:

- Es una puntuación creada por la Universidad de Washington.
- Es la evaluación de la importancia **TOTAL de una revista científica.**
- Las revistas se evalúan de acuerdo al **número de citas entrantes.** Las citas de revistas con una **clasificación alta pesan más** en el Eigenfactor que las revistas de **clasificación menor.**
- El puntaje Eigenfactor pretende **dar una medida de la frecuencia de uso de una revista** científica y por lo tanto implica, **la frecuencia con la cual un investigador accederá a una revista.**

# Eigenfactor:

- Las revistas científicas que tengan **una mayor contribución en su campo**, tendrán una **mayor puntuación Eigenfactor**.
- El abordaje de la puntuación **Eigenfactor**, es considerada de **lo más robusto**.
- Es común que el **Eigenfactor** se utilice en combinación con **H-index**.

<http://www.eigenfactor.org/>

# Factor de Impacto (FI)

- Los Factores de Impacto son calculados cada año por Thomson Reuters ( >40 años)
- Se utilizan frecuentemente como herramienta para clasificar la importancia de una revista.
- En un año dado, el factor de impacto en una revista científica, es el **promedio** del número de citas recibidas de un artículo publicado en esa revista durante los dos años anteriores.

Si una revista tiene un factor de impacto de 4 en 2012. Significa que, los artículos publicados en esa revista entre **2011 y 2010** recibieron en promedio **4 citas por artículo**.

**A** = Número de veces que los artículos publicados entre 2011 y 2010 fueron citados durante el año 2012

**B** = Número total de **unidades citables\*** de la revista entre 2011 y 2010

$A/B$  = Factor de Impacto 2012

- Es una medida que refleja el **PROMEDIO** de citas de artículos publicados en revistas científicas.

(\*Unidad citable = articles, reviews, proceedings o notes)

# Journal Citation Reports (JCR)

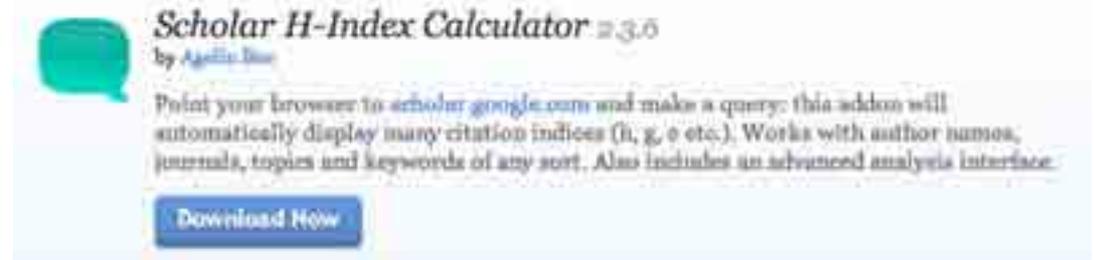

- Los JCR son calculados por Thomson Reuters (<http://wokinfo.com/media/pdf/jcrwebfs.pdf>).
- Esta clasificación, ayuda a medir la influencia de la investigación y el impacto a nivel revista y categoría.
- Ayuda al autor a decidir que revistas son las más adecuadas y las más importantes para presentar en ellas.
- **Ayuda a los investigadores a descubrir revistas en su área.**

# H-index

- Creado por la Universidad de California.
- El H-index expresa el número de artículos (h) de una revista que ha recibido al menos h citas.
- El H-index intenta medir tanto la **productividad** como el **impacto** de un trabajo publicado **de un investigador**.
- El H-index se basa en el mayor número de artículos citados y el número de citas que han recibido en otras publicaciones.
- **Mide la calidad y cantidad de los artículos científicos.**

**Scholar H-Index Calculator** v3.6  
by Agustin Diaz

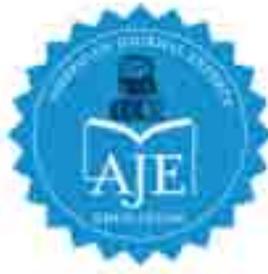

Point your browser to [scholar.google.com](http://scholar.google.com) and make a query: this addon will automatically display many citation indices (h, g, e etc.). Works with author names, journals, topics and keywords of any sort. Also includes an advanced analysis interface.

[Download Now](#)

# Immediacy Index

- Calculado por el Institute for Scientific Information (ISI) por Thomson Reuters .
- Se puede calcular después de que la revista sea indexada y citada **durante un año entero**.
- El immediacy index **considera las citas** de los artículos de ese **mismo año**.
- Es indicativo de la **velocidad** en la que **artículos publicados son citados** en otras referencias bibliográficas en un año.
- Un **immediacy index alto** significa que las **publicaciones de la revista se han difundido rápidamente**, han sido **altamente estimadas** y han **contribuido a su área de estudio**.
- Un **problema del immediacy index** es que no se calculan las **citas** presentadas **al final del año**.

**Eigenfactor → Frecuencia**

**Factor de Impacto → Promedio**

**Journal Citation Reports (JCR) → Categoría**

**H-Index → Productividad**

**Immediacy Index → Velocidad**

### Score in context
